What We Set Out to Answer

Six business questions that drive real decisions at any streaming platform.

01 Which markets generate the most revenue and which are growing fastest?

02 Which artists and genres are driving streams globally?

03 How does revenue trend across 2022, 2023 and 2024?

04 Where is listener engagement strongest and where are people skipping?

05 What is the scale of playlist engagement across markets?

06 Which regions should the business prioritise for growth investment?

Revenue By Artist

Insights

- Q4 is king, November and December consistently spike 15 to 20% above monthly averages across all regions. Holiday season drives listener behaviour globally.
- Playlist adds equal loyalty 919M playlist adds signal strong listener retention. Artists with high playlist adds correlate directly with sustained stream growth.
- Genre diversity matters No single genre dominates globally. Pop leads overall but Afrobeats, K-Pop and Latin each dominate their home regions, a localisation opportunity for any platform looking to grow market share.
- 2024 outperformed Revenue grew from \$10.3M in 2022 to \$11.4M in 2024. The upward trend held across all regions with Europe widening its lead year on year.

Where to Focus Next

Three actionable recommendations based on the data.

01

Double down on Africa

Africa shows the highest growth potential. Nigeria and South Africa are streaming at scale on the free tier. A localised premium pricing strategy could meaningfully convert free users and grow ARPU without losing volume.

02

Invest in Q4 campaigns

The November to December spike is consistent across all three years. Proactive artist campaigns, curated playlists and targeted ad spend in Q4 would amplify an already strong seasonal trend.

03

Back rising artists early

Artists on a rising trajectory like Tyla and Rema in Afrobeats show disproportionate playlist adds relative to stream count, an early signal of breakout potential worth prioritising in editorial placements.
